

September 13, 2010
Project No. 20102711V1

Mr. Ranajit Sahu, C.E.M., Ph.D.
Basic Remediation Company
875 West Warm Springs Road
Henderson, Nevada 89011

RE: Eastside North Confirmation Sampling, Henderson, Nevada

Dear Dr. Sahu:

PROVIDING

- Geotechnical Engineering
- IAS Accredited Materials Testing & Observation
- AASHTO Accredited Testing Laboratory
- Environmental Engineering
- Drilling Services
- Ground Source Heat Exchange
- Thermal Conductivity Testing

On June 21, 2010 to August 26, 2010, Geotechnical and Environmental Services, Inc. (GES) implemented a sampling program per the direction of Dr. Ranajit Sahu of Basic Remediation Company (BRC). This activity report details the scope of services performed, which consisted of the following:

- June 18, 2010: GES coordinated the sampling event with Weston Solutions (access and scheduling) and ERM (Sampling and Analysis Plan (SAP)) information.
- June 21, 2010 to August 26, 2010: Located three hundred (300) sample locations with a hand-held Garmin GPS Unit. The sample location coordinates were provided by ERM.
- June 21, 2010 to August 26, 2010: Collected three hundred (300) surface soil samples from the recently scraped surface areas throughout the site. In addition to the parent samples, samples were collected for Quality Assurance/Quality Control (QA/QC) purposes. The number of QA/QC samples (duplicate and matrix spike/matrix spike (MS/MSD) duplicate samples) varied, depending on the chemical parameter being sampled as directed by Maria Barajas-Albalawi of ERM. A total of sixty seven (67) field duplicate samples and thirty six (36) matrix spike/matrix spike duplicate samples were collected throughout the sampling event. The exact number of duplicates and MS/MSD duplicate samples per chemical constituent are described below. A total of fifteen (15) rinsate samples were also taken throughout the sampling event.

GES's scope of services was to implement the field sampling program so that others can evaluate the data resulting from our sampling efforts. Therefore, this report does not provide conclusions regarding the analytes or their levels of occurrence.

We make the ground work for you...®

Field Investigation Methodology

Soils – Prior to the soil sampling event, the soil within the polygons was scraped and removed from the site. Three hundred (300) soil samples were collected from the surface using hand sampling methods. The samples were located in 103 polygon-shaped areas within the TIMET Eastside lands (Figures 1 and 2). The polygons were located within sub-areas of the TIMET Eastside lands. The polygon identification number, TIMET Eastside Sub-Area location, number of samples collected within the polygon and the date the samples were collected are listed in Table 1. Figures 3 through 3b show typical site conditions during the sampling event.

Duplicate samples were collected based on 10 percent of the parent samples collected for each analyte. The duplicate samples are listed in Table 2. The MS/MSD duplicate samples were collected based on five percent of the parent samples collected for each analyte. The MS/MSD duplicate samples are listed in Table 2.

Since no volatile compounds are being analyzed for this sampling event and no volatile compounds have been detected historically at levels that present a health hazard, no field screening using PIDs was performed for this sampling event.

The samples were collected in separate clean 2.5-inch diameter by 6.0-inch long stainless steel sleeves using a stainless steel scoop and hand sampling techniques. The ends of the sleeves retained for analysis were covered with Teflon sheeting and a plastic cap then placed in a sealable ZipLock™ type plastic bag. The samples were shipped to Test America Laboratory (Earth City, Missouri) for analyses of metals, PCBs, organochlorine pesticides, aldehydes, and dioxin/furans; and to GEL Laboratories (Charleston, SC) for analyses of radionuclides, semivolatile organic compounds (SVOC) and polyaromatic hydrocarbons.

The samples were provided unique sampling numbers with the following designations: Sample Location, Date, and Time. For example, the first sample was identified as SRC5-J21CE2-0, 6/21/10, 1145, while the final sampling location was identified as TMC2-AN29-0, 8/26/2010, 1350. The soil samples were stored in coolers with ice and shipped daily via FedEx to Test America Laboratories and GEL Laboratory.

Asbestos Sampling

GES collected a total of forty four (44) surface soil samples for asbestos analysis, using the EPA 540 Elutriator Method. Duplicate samples were also collected for five (5) locations. The samples were collected in clean plastic wide-mouth containers provided by EMSL Analytical, Inc. and labeled with the sample location, date, and time. The samples were packed in coolers and submitted to EMSL Analytical, Inc. for analysis.

Decontamination Procedures

The surface sampling equipment was decontaminated prior to initial usage and then between each confirmation sample location using Liquinox™ detergent wash, a potable water rinse, and a final rinse with commercially available distilled water.

Investigative Derived Waste (IDW)

All Investigative Derived Waste consisted of decontamination waste (Liquinox, laboratory grade

detergent and rinse water). Decontamination fluid was minimal and disposed of in an appropriate manner.

Documentation

Documentation of the field activities consists of this Field Activity Report with figures showing the site location (Vicinity Map, Figure 1), confirmation sample locations (Site Map, Figure 2), and photographs of representative sample locations (Figure 3). These documents are included in Attachments A. Copies of the Chain-of-Custodies are also included in Attachments B.

Changes to Original Planned Work

During this work there were no modifications to the original scope of services.

We appreciate this opportunity to provide our professional services. If you have questions or comment, feel free to contact our office at (702) 365-1001.

Sincerely,
Geotechnical & Environmental Services, Inc.

Comments/Instructions:

* Hold the Aroclors if total results are 33ppb or greater.
Please report results in dry weight, therefore all soil will require % moisture testing.

Comments/Instructions:

* Hold the Aroclors if total results are 33ppb or greater.
Please report results in dry weight, therefore all soil will require % moisture testing.
